EL CALLAO EN LA EPOCA DEL COLONIAJE ANTES Y DESPUES DE LA CATASTROFE DE 1746

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 56 pages. Original publisher: Moffett Field, Calif. : National Aeronautics and Space Administration, Ames Research Center ; Springfield, Va. : National Technical Information Service, distributor, 1991 OCLC Number: (OCoLC)60785800 Excerpt: . . . expressionsinvolvingvectorfields. Section5 describesan algorithm for generatingexplicitlyintegrableflowsassociatedwith nilpotentLiealgebras. Section6 exploits the relation between Taylor series and trees to study a class of intrinsic numerical integrators. We begin in Section 2 with some background. The results surveyed here are the work of a variety of mathematicians: especially want to mention the contributions of my collaborators Peter Crouch, Matthew Grayson and Richard Larson. The work on algebras of trees and its applications to symbolic computation is joint work with Richard Larson. All of the algorithms described here rest upon this foundation. Fhe work on explicitly integrable flows and nilpotent Lie algebras is joint work with Matthew Grayson. The work on numerical algorithms evolving on groups is joint work with Peter Crouch. 2 Background Consider a differential equation i (t) E, (x (t)) u and (x (t)), : (0) zo E p, N (1) where El and E2 are vector fields and u is a parameter. In applications, u will be either a small perturbation u e, a control t--- u (t), or simply the constant u-I. Unless the vector fields 1 and E2 are very special, no algorithm is known which will return the general solution to the system in closed form. Our objective is to find efficient algorithms to compute various approximate solutions of the differential equation exactly using symbolic computation. Although the impact of symbolic computation in this area is recent, the connection between the existence of closed form solutions...
