Physical and Chemical Mechanisms in Molecular Radiation Biology

By Glass, William A. / Varma, Matesh N.

Book Condition: New. Publisher/Verlag: Springer, Berlin | Proceedings of a Workshop held at the National Academy of Sciences Study Center, Woods Hole, Massachusetts, September 3-6, 1990 | The fundamental understanding of the production of biological effects by ionizing radiation may well be one of the most important scientific objectives of mankind; such understanding could lead to the effective and safe utilization of the nuclear energy option. In addition, this knowledge will be of immense value in such diverse fields as radiation therapy and diagnosis and in the space program. To achieve the above stated objective, the U. S. Department of Energy (DOE) and its predecessors embarked upon a fundamental interdisciplinary research program some 35 years ago. A critical component of this program is the Radiological and Chemical Physics Program (RCPP). When the RCPP was established, there was very little basic knowledge in the fields of physics, chemistry, and biology that could be directly applied to understanding the effects of radiation on biological systems. Progress of the RCPP program in its first 15 years was documented in the proceedings of a conference held at Airlie, Virginia, in 1972. At this conference, it was clear that considerable progress had been made in...

Reviews

Comprehensive information for publication enthusiasts. It is really exciting through reading through time. I am happy to tell you that here is the greatest book I have got read through in my personal existence and can be the best ebook for possibly.

-- **Reese Morissette**

This book is really gripping and fascinating. I really could comprehend almost everything using this published ebook. I am just very easily can get a delight of reading a published publication.

-- **Kailey Pacocha**
